Archiviert am: 2025-07-17 18:43:24

You can configure which IXM One users types can work with spot variants to create different versions of a centrally managed spot.

To do so, perform the following steps:

1. Navigate to the configuration files on the server at: `GVServer2\www\gv2\gf\GFWebHtmlCustomer\`
2. Open one of the following folders:
 - **00000**: edit configurations for the entire server, which means for all customers.
 - **000xxx**: edit customer-specific settings. xxx is the customer ID.
3. Open the `config.json` file in your folder with a text editor like Notepad++.
4. Set **cms > hideSpotDetailTabVariantsForUserType** to one or more of the following options:
 - **Admin**: admin users can see spot variants.
 - **StandardUser**: standard users can see spot variants.
 - **LocationUser**: location users can see spot variants.
5. Ensure that **spotVariationsEnabled** is set to **true**.
6. Save your changes and close the file.

```
"cms": {  
  "hideSpotDetailTabVariantsForUserType": [  
    "LocationUser",  
  ],  
  "spotVariationsEnabled": true,  
}
```
