You can link spots in IXM One. This means that spots remain in their original spot group, but are also visible in a spot group they're linked to.

To enable linking spots for user types, perform the following steps:

1. Navigate to the configuration files on the server at: GVServer2\www\gv2\gf\GFWebHtmlCustomer\
2. Open one of the following folders:
 - **00000**: edit configurations for the entire server, which means for all customers.
 - **000xxx**: edit customer-specific settings. xxx is the customer ID.
3. Open the config.json file in your folder with a text editor like Notepad++.
4. Set **cms > EnableSpotLinkCreationForUserType** to one or more of the following options:

Admin: admin users can link spots.

StandardUser: standard users can link spots.

LocationUser: location users can link spots.

5. Save your changes and close the file.

```
"cms": {
  "EnableSpotLinkCreationForUserType": [
    "Admin",
    "StandardUser",
    "LocationUser"
  ],
}
```
