Holiday selection allows users of IXM One to control the display of content on holidays in specific locations. This includes flexibly adapting operating times based on local demands and creating local holiday lists.

To enable holiday selection, perform the following steps:

1. Navigate to the configuration files on the server at: GVServer2\www\gv2\gf\GFWebHtmlCustomer\
2. Open one of the following folders:
 - **00000**: edit configurations for the entire server, which means for all customers.
 - **000xxx**: edit customer-specific settings. xxx is the customer ID.
3. Open the config.json file in your folder with a text editor like Notepad++.
4. Set **cms > enableHolidaySelection** to **true**.
5. Save your changes and close the file.

```
"cms": {  
    "enableHolidaySelection": true,  
}
```
