

Enable SSP

URL: <https://docs.grassfish.com/docs/enable-ssp>

Archiviert am: 2025-07-17 18:37:37

To enable SSP in the IXM One configuration file, perform the following steps:

1. Navigate to the configuration files on the server at: GVServer2\www\gv2\gf\GFWebHtmlCustomer\
2. Open one of the following folders:
 - **00000**: edit configurations for the entire server, which means for all customers.
 - **000xxx**: edit customer-specific settings. xxx is the customer ID.
3. Open the config.json file in your folder with a text editor like Notepad++.
4. Change the following settings:
 - Set **enableDooh** to **DOOHPlatform** or **DOOHlite** depending on which version you're using. This setting enables SSP.
 - Set **enableCategoriesPerScreen** to **true**.
 - Set **enableLiveTags** to **true**.
 - Set **enableSpotPropertyInheritanceForUserType** to **Admin**.
5. Save your changes and close the config file.

```
"enableDooh": "DOOHPlatform",
"enableCategoriesPerScreen": true,
"enableLiveTags": true,
"enableSpotPropertyInheritanceForUserType":
[
  "Admin"
]
```

Note

For more information, see our [SSP installation guide](#).
