---

By default, location users can't access spot templates. That means, they can't see or select them in the spot list. However, you can enable access to spot templates for location users.

To do so, perform the following steps:

1. Navigate to the configuration files on the server at: `GVServer2\www\gv2\gf\GFWebHtmlCustomer\`
2. Open one of the following folders:
  - **00000**: edit configurations for the entire server, which means for all customers.
  - **000xxx**: edit customer-specific settings. xxx is the customer ID.
3. Open the `config.json` file in your folder with a text editor like Notepad++.
4. Under **cms**, add the following line: **allowTemplateSpotCreationForLocationUser**.
5. Set its value to **true**.
6. Save your changes and close the file.

```
cms": {  
    "allowTemplateSpotCreationForLocationUser": true  
}
```
