---

You can add a second tree to the tree view in IXM One. This allows you, for example, to display two spot group trees.

To enable the second tree, perform the following steps:

1. Navigate to the configuration files on the server at: GVServer2\www\gv2\gf\GFWebHtmlCustomer\
2. Open one of the following folders:
  - **00000**: edit configurations for the entire server, which means for all customers.
  - **000xxx**: edit customer-specific settings. xxx is the customer ID.
3. Open the config.json file in your folder with a text editor like Notepad++.
4. Set **allowSecondTree** to one or more of the following options:
  - **Admin**: admin users can use the second tree.
  - **StandardUser**: standard users can use the second tree.
  - **LocationUser**: location users can use the second tree.
5. Save your changes and close the file.

```
{ "cms":  
  {"allowSecondTree": ["Admin", "StandardUser"]  
  }  
}
```

## Dependencies

If you use the second tree view, you can't use the following additional screen playlist filter options in IXM One.
