---

You can add UDC data importers in IXM One. This allows you, for example, to import weather or news data and export it to a player database.

To enable UDC, perform the following steps:

1. Navigate to the configuration files on the server at: GVServer2\www\gv2\gf\GFWebHtmlCustomer\
2. Open one of the following folders:
  - **00000**: edit configurations for the entire server, which means for all customers.
  - **000xxx**: edit customer-specific settings. xxx is the customer ID.
3. Open the config.json file in your folder with a text editor like Notepad++.
4. Set **enableUDC** to **true**.
5. Save your changes and close the file.

```
"cms": {  
  "enableUDC": true  
}
```
