You can specify which IXM One user type is allowed to create HTML Composer spots.

To do so, perform the following steps:

1. Navigate to the configuration files on the server at: GVServer2\www\gv2\gf\GFWebHtmlCustomer\

2. Open one of the following folders:

   - **00000**: edit configurations for the entire server, which means for all customers.

   - **000xxx**: edit customer-specific settings. xxx is the customer ID.

3. Open the config.json file in your folder with a text editor like Notepad++.

4. Set **allowHTMLComposerSpotCreationForUserType** to one or more of the following options:

   - **Admin**: admin users can create HTML Composer spots.

   - **StandardUser**: standard users can create HTML Composer spots.

   - **LocationUser**: location users can create HTML Composer spots.

5. Save your changes and close the file.

```
"cms": {
        "allowHTMLComposerSpotCreationForUserType": [
                    "Admin",
                    "StandardUser",
                    "LocationUser"
                ],
}
```
