You can specify which files can be uploaded as spot files. That means, user can't use other file types for spots in IXM One.

To create a list of allowed file formats, perform the following steps:

1. Navigate to the configuration files on the server at: GVServer2\www\gv2\gf\GFWebHtmlCustomer\

2. Open one of the following folders:

   ◦ **00000**: edit configurations for the entire server, which means for all customers.

   ◦ **000xxx**: edit customer-specific settings. xxx is the customer ID.

3. Open the config.json file in your folder with a text editor like Notepad++.

4. Go to **common > upload > types > spot > fileTypes > extensions**.

5. Specify the file extensions of file formats that you want to allow as spot files such as **.html.zip**.

6. Save your changes and close the file.

```
"common": {
  "upload": {
    "types": {
      "media": {
        "maxSize": "1024MB"
      },
      "spot": {
        "fileTypes": {
          "extensions": [
            ".mp4",
            ".html.zip",
            ".asc.zip"
          ]
        }
      }
    }
  }
}
```
